

# Trending Newsletter in August

Creative Proteomics is a professional CRO company that specializes in a full range of services to support various proteome-related researches from identification of single proteins to large-scale proteomic studies. With the most advanced technology platforms and experienced staffs, we can provide proteomics services, metabolomics services, bioinformatics services, *etc.*

## August Theme: Glycomics

Glycomics refers to the studies that profile the glycome, which is a broad and emerging scientific discipline focused on defining the structures and functional roles of glycans in biological systems. As we know, glycans participate in almost every biological process from intracellular signaling to organ development. Recent technological advances have significantly lowered the barrier of glycomics analysis. And various high-resolution and highly sensitive methods are available, such as microarrays, high performance liquid chromatography (HPLC), and capillary electrophoresis (CE).

## Upcoming Events

Name	Date	Country	City
<a href="#">Structure and Mechanisms of Membrane Proteins</a>	2018/8/2-2018/8/3	U.K.	Birmingham
<a href="#">Structural Biology Conference 2018</a>	2018/8/6-2018/8/7	U.A.E	Dubai
<a href="#">The 10<sup>th</sup> Annual Bioprocessing Summit</a>	2018/8/13-2018/8/17	U.S.	Boston
<a href="#">The 35<sup>th</sup> European Peptide Symposium</a>	2018/8/26-2018/8/31	Ireland	Dublin

## Popular Services

With years of experience, Creative Proteomics manages advanced technologies (like mass spectrometry, liquid chromatography, and microarray) to offer a wide range of services.

## Video

### Glycan Microarrays

Glycan microarrays first described in 2002 provide a high-throughput means of profiling the interactions of glycan-binding proteins with their ligands. This method can be used to identify specific binding of glycans by lectins...

[Learn More](#)

### Glycomics Analysis by Mass Spectrometry

Mass spectrometry (MS) plays an important role in glycomics analysis. General glycomics strategies by MS often involve the sample preparation, glycan release, derivatization of glycans...

## Blog

### Brief Introduction of Post-translational Modifications (PTMs)

Protein PTMs can further facilitate the complexity from the level of the genome to the proteome. PTMs are chemical alterations to protein structures, typically catalyzed by exceedingly substrate-specific enzymes...

### Brief Introduction of Glycan Microarrays

In glycan microarrays, glycans derivatized with functional groups can be covalently or non-covalently attached to solid surfaces. The glycan microarray can be interrogated with glycan-binding proteins (GBPs) or other...
